Game Version: 1.5.1

Description

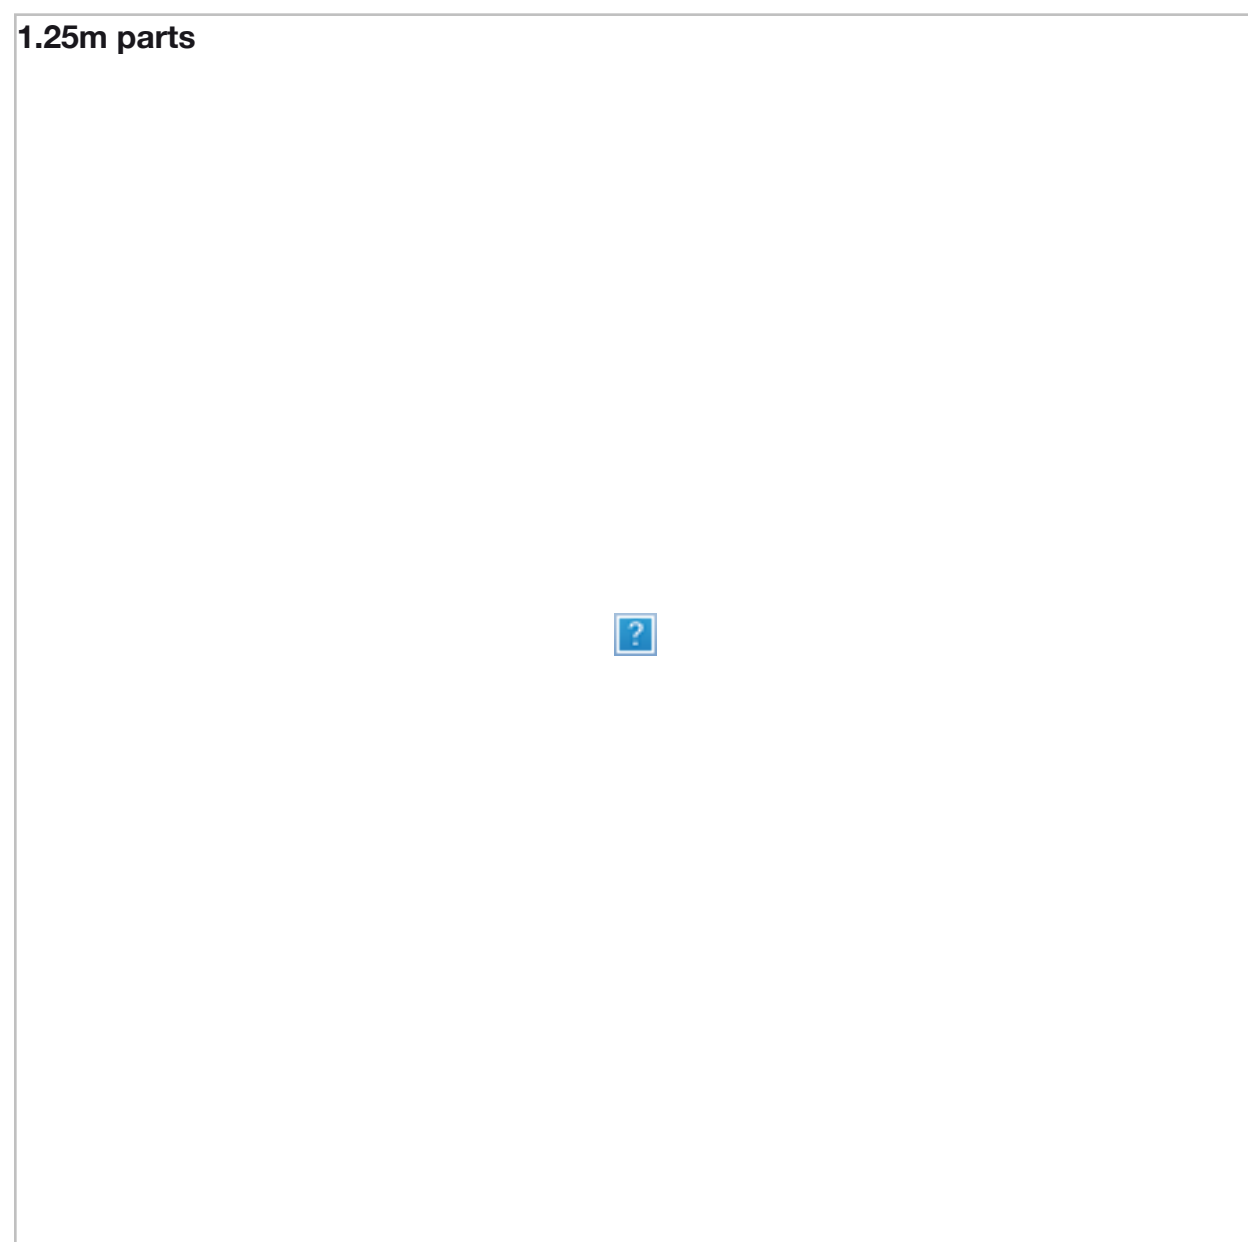

Files

Images

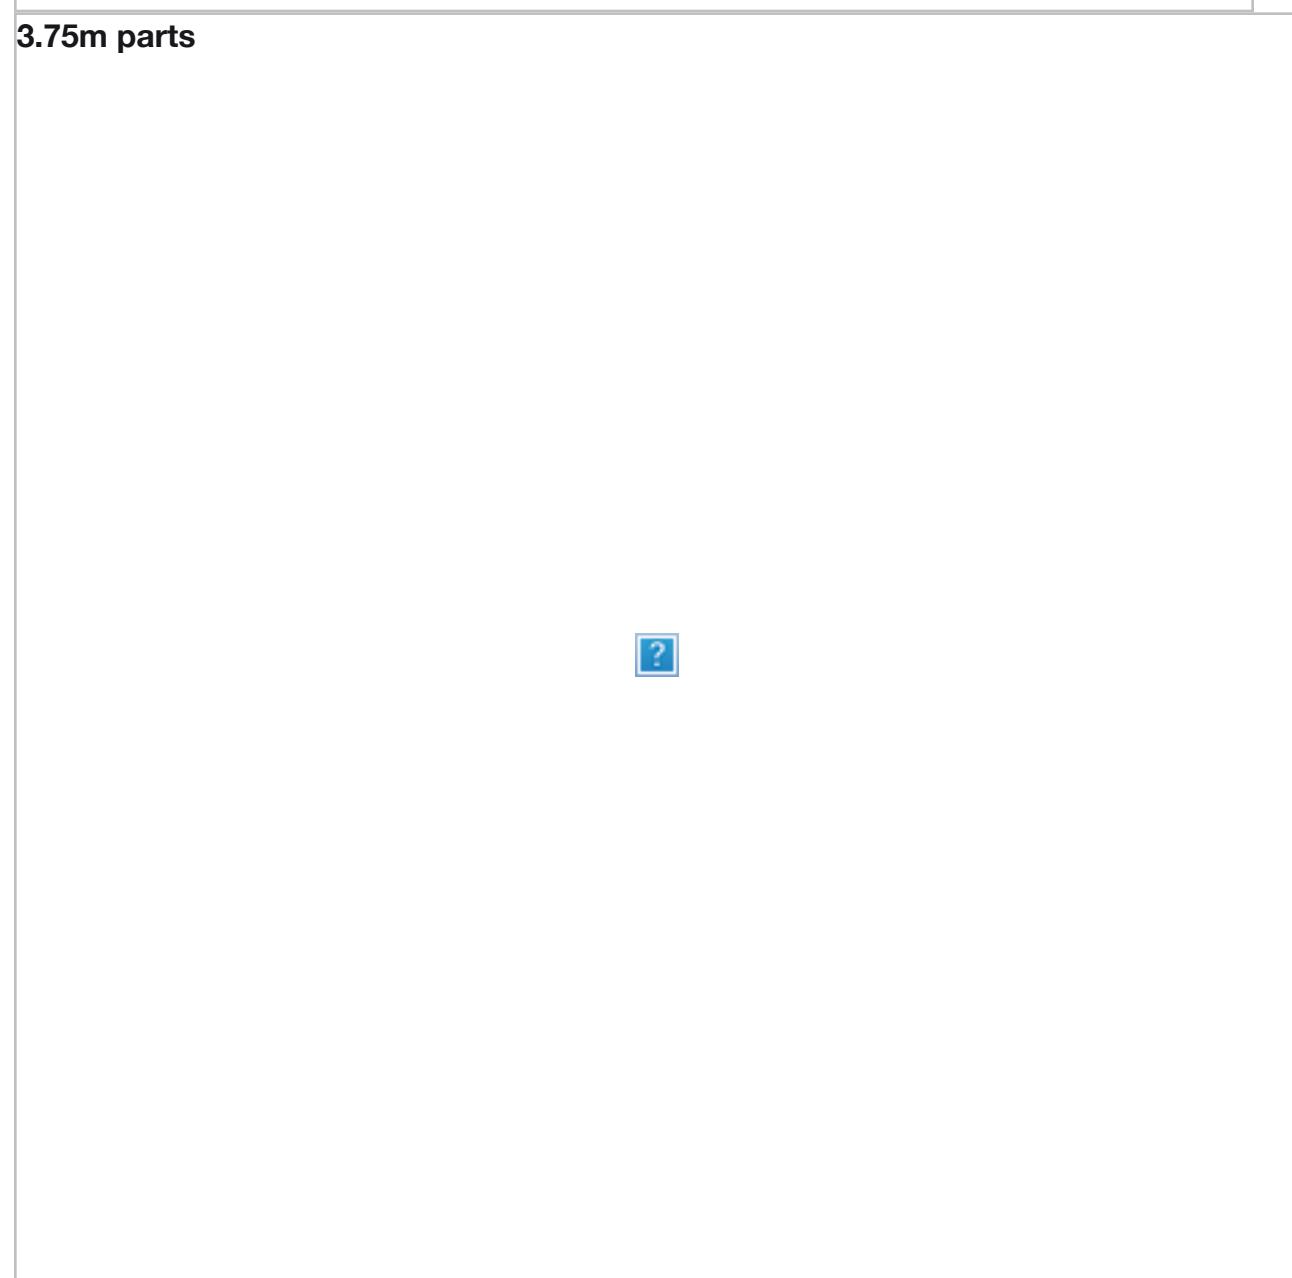

Relations

This pack contains many stockalike station parts to improve the quality of your space station and surface base construction. They also look great as part of ships or landers.

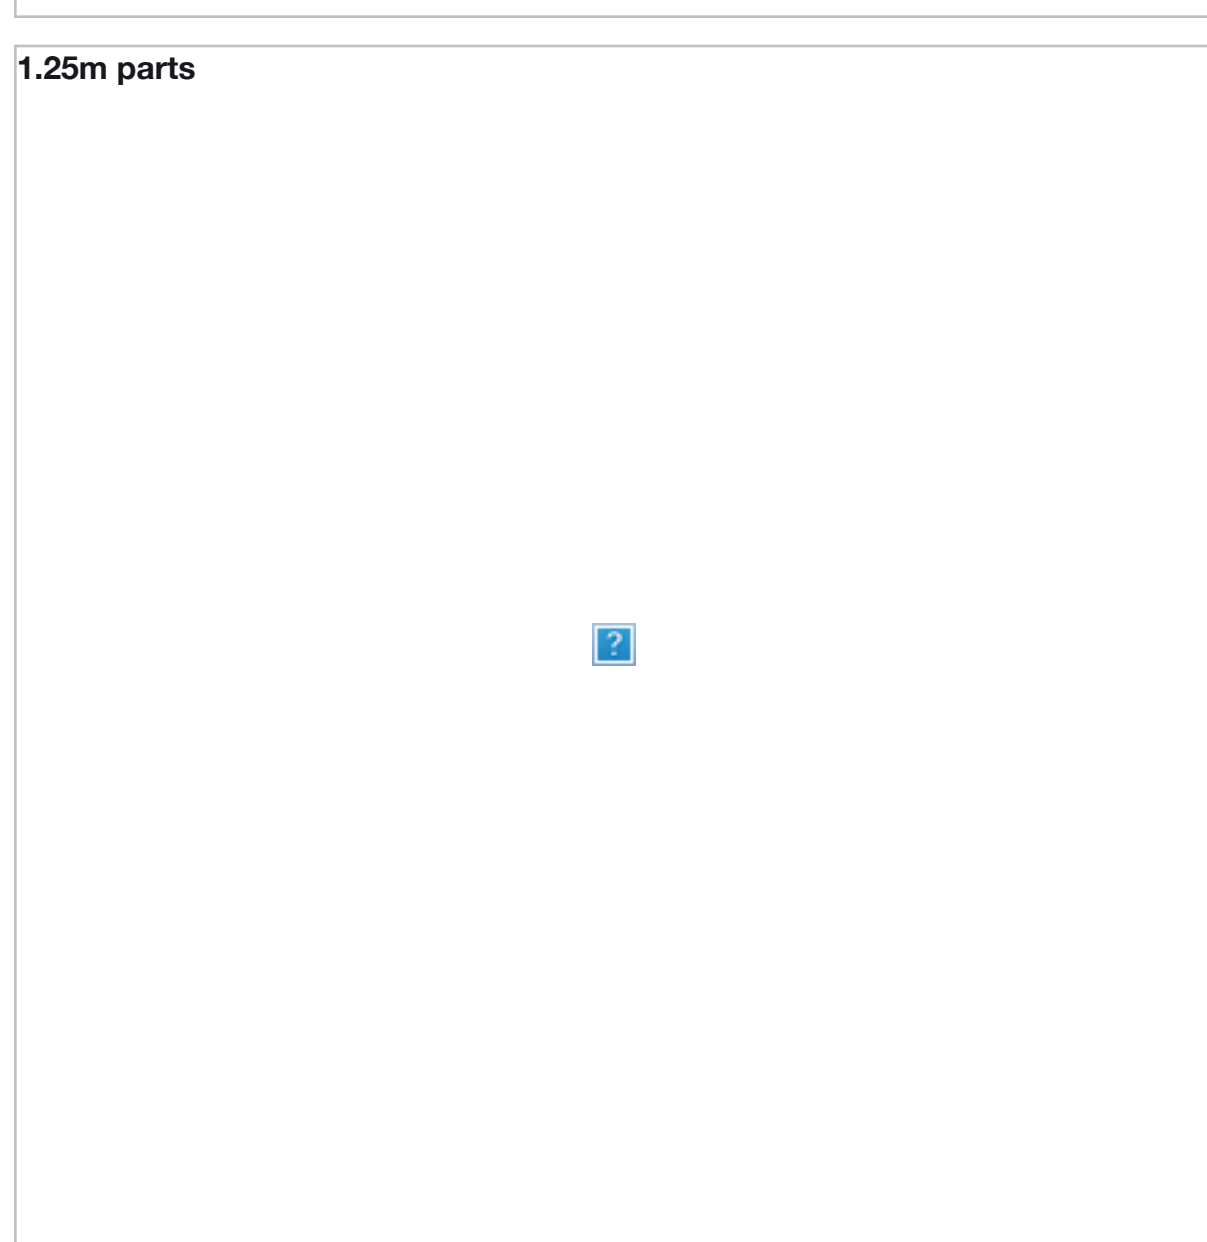

1.25m parts

3.75m parts

1.25m parts

3.75m parts

Known Issues:

- IVAs for the 2.5m parts are still works in progress
- IVAs for the 3.75m parts are blocked out and merely white

Future Plans:

- More 3.75 m sized parts
- Greenhouses, cargo/utility pods
- Ladders and heavy duty landing legs

This parts pack bundles **RasterPropMonitor**, distributed under its own license. Additional details including source can be found in the linked thread.

As of 10/30/2017

Installed it.

Doesn't work. Not sure why, I get no error message and I installed it properly so... hmmm

NOT SAYING IT'S A BAD MOD, I love stockalike stuff but, just saying. Doesn't work with 1.3.1

Isn't working well with 1.3 - is there a bug somewhere?

Was getting nervous there. This is a must-have for any base or space station and it is always good to see a release marked as good for the current version of KSP. Haven't checked it out just yet, but I am sure this pack will not disappoint!

Does this mod have C.T.T. support?

Posted May 11, 2016 #37

plz update this for 1.1 and newer versions. I have 1.1 because there's no need to go to 1.1.2 for me. These are my most used items!

2 things about the station night pic:
1. Day pic plz i can berly see the actuall station
2. Possible Example station download in the mod folder?
Otherwise, fine mod :D

Hi,I do not know where my comment went but here it is again:
Great mod!
Also if parts fall off then check the config file for them e.g.: the part: "Pressurized CZ-15 Radial Attachment Module" falls of, in it's config file "crewtube-attach-25.cfg" change the "breakingTorque = 00" to "breakingTorque = 100" and it will work nicely.
Also the mod works for me on 1.0.2.

Great mod!

(Also there is a config file error in "crewtube-attach-25", change the "breakingTorque = 00" to "breakingTorque = 100" otherwise it will immediately fall off at lunch.)

This mod does not work with 1.0.2 Or I am doing something wrong.
I tried the readme install, and just copying the contents straight into my Gamedata folder. Nothing ever shows up. Fresh install, reinstall, just this mod and ksp. Nothing shows still.
I hope this is not dead, as this mod looks outstanding! And I am greedy and want more station parts.
Let us know if you need more details!

It's not just you. This mod is NOT working. Unfortunate, really, as you say, I am greedy too and want more station parts and this mod looks great.
